

# ISO/IEC 27001 LEAD IMPLEMENTER COURSE SYNOPSIS

 [info@trainingheights.com](mailto:info@trainingheights.com)

 [www.trainingheights.com](http://www.trainingheights.com)

# OVERVIEW

ISO/IEC 27001:2022 is the international standard for establishing and improving an Information Security Management System (ISMS). It helps organizations identify, assess, and treat information security risks based on their needs. The standard protects critical business information from threats like financial loss, brand damage, and operational disruption. This training provides a strong understanding of ISO 27001 requirements through case studies, exercises, and role plays. Participants gain practical skills to implement an effective ISMS and build trust with stakeholders.

01

## **Course Introduction:**

ISO/IEC 27001:2022 is the global standard for establishing, implementing, maintaining, and continually improving an Information Security Management System (ISMS) to protect organizational information.

02

## **Strategic Value of ISO/IEC 27001:**

The standard supports organizations in identifying and treating information security risks, protecting critical assets from financial loss, reputational damage, and operational disruption, while improving business trust and compliance.

03

## **Learning Outcomes & Practical Benefits:**

Through case studies, exercises, and role plays, participants will gain the practical skills needed to implement and manage an effective ISMS, enhance data protection, and strengthen stakeholder confidence.

# WHAT YOU WILL LEARN

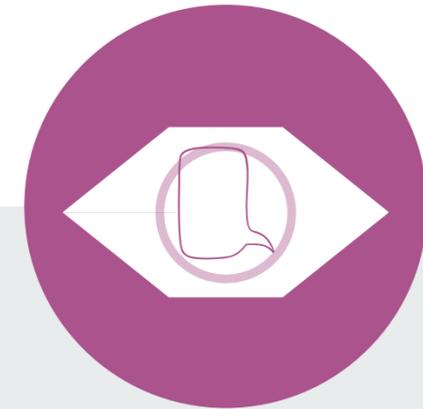

## ISMS Foundation

Learn the purpose and benefits of an ISMS, how to set organizational context, create required documents, and define the scope and Statement of Applicability.

## Policy Risk Management & Governance

Create policies aligned with strategy, manage risks with assessment and treatment plans, and set up internal audits and management reviews.

## Annex A Controls and Implementation

Understand Annex A controls, select and apply the right measures to mitigate risks, and gain skills to monitor, improve, and sustain ISMS effectiveness.

# TARGET AUDIENCE

“This course is designed for professionals responsible for information security, IT governance, risk management, and anyone seeking to implement or manage an ISO/IEC 27001-compliant ISMS.”

## WHO SHOULD ATTEND

ISMS Implementers

Project Managers

Aspiring ISMS Professionals

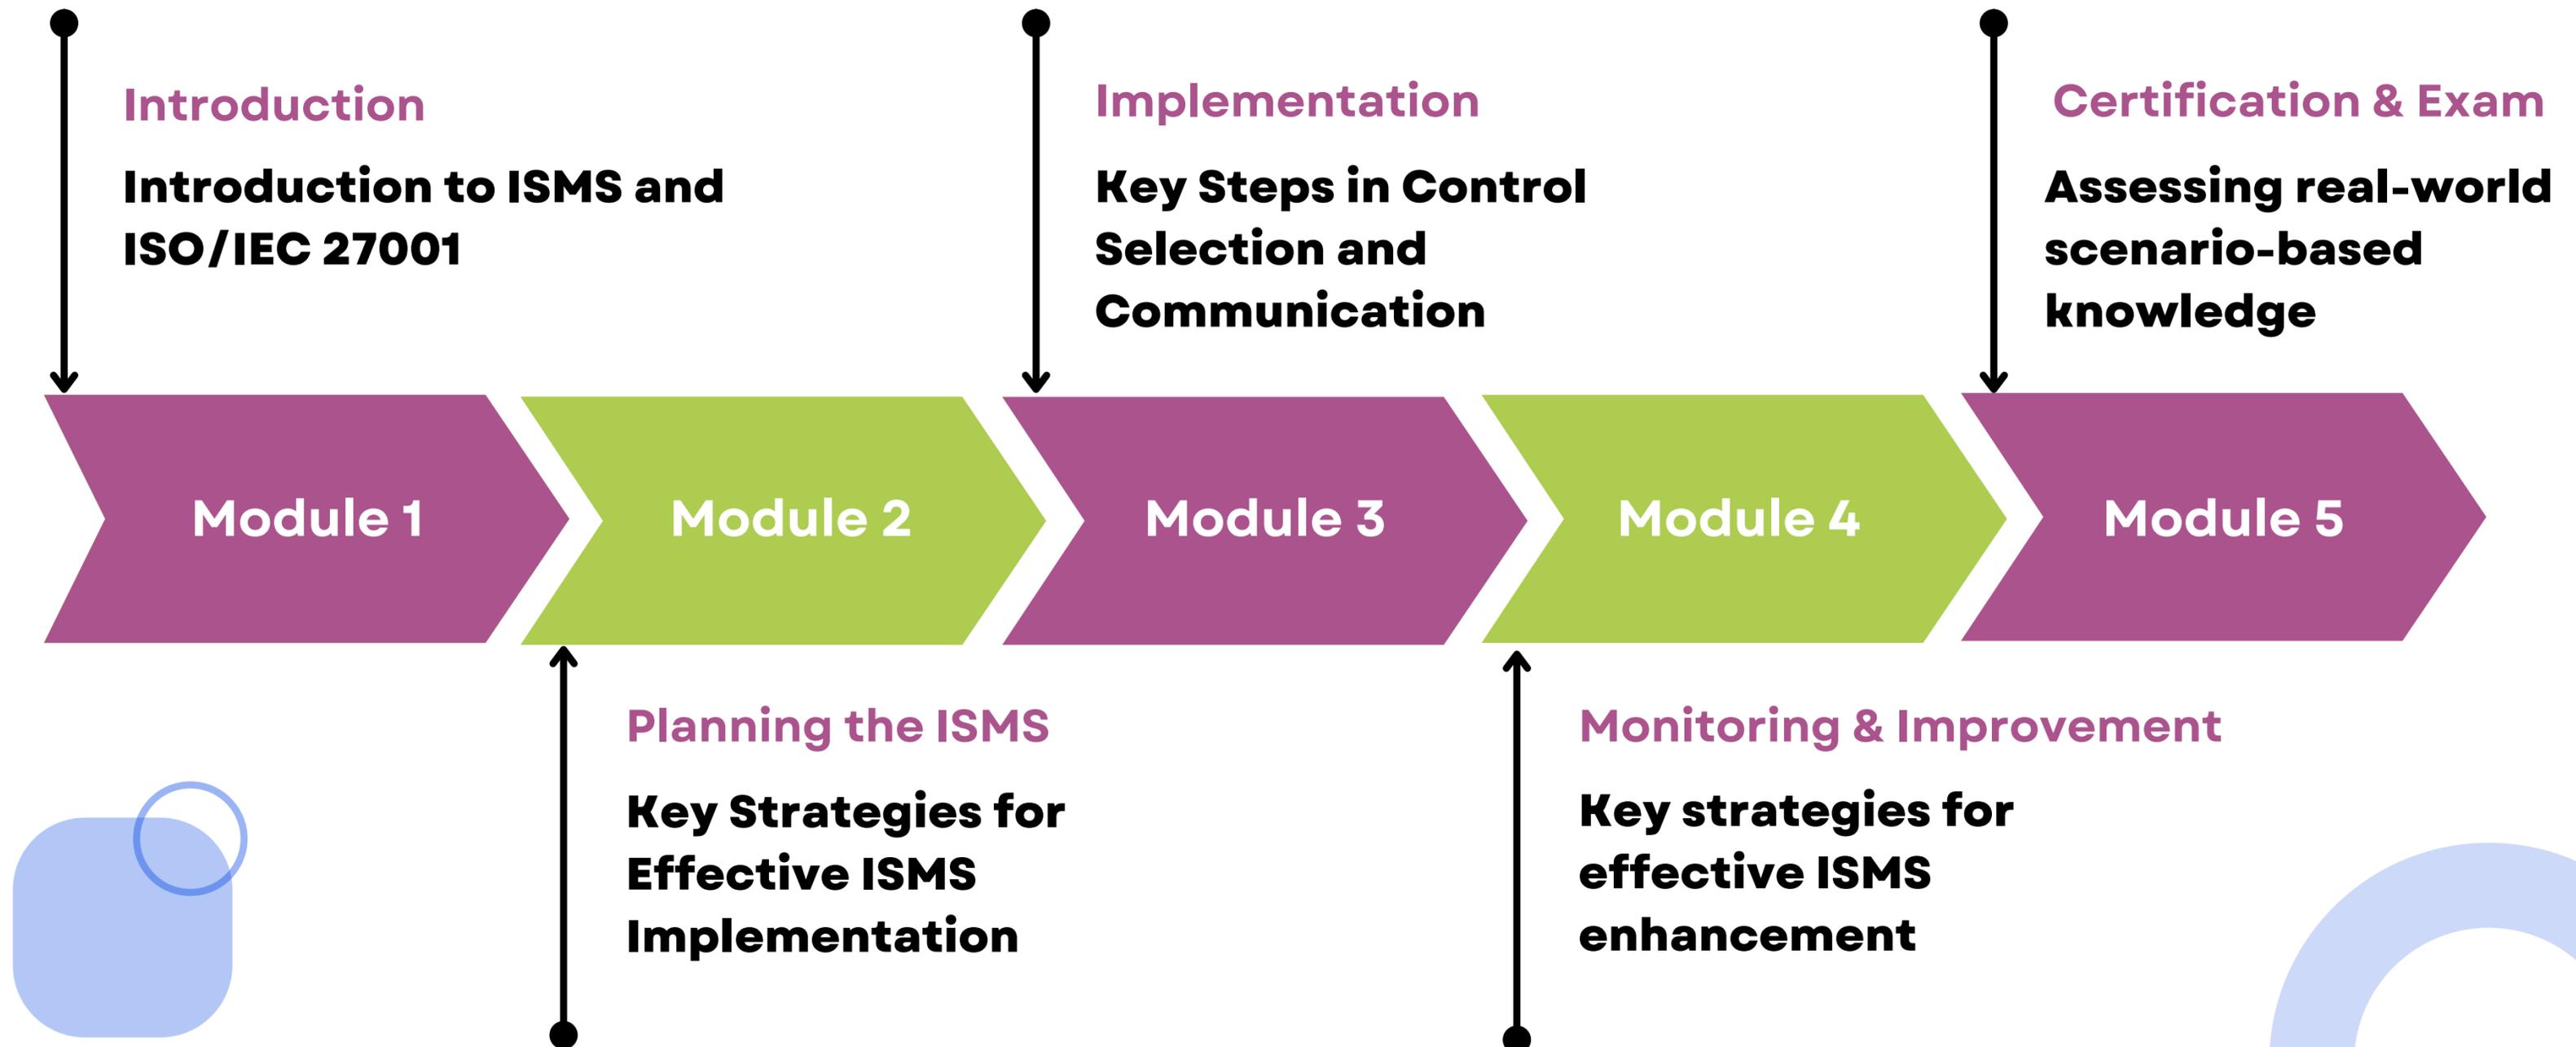

IT professionals

ISMS Consultants

Top Management

# COURSE STRUCTURE

This five-day course provides a comprehensive framework, covering initiation, planning, implementation, monitoring, and certification of ISMS, combining lectures, practical exercises, and assessments for enhanced learning.

# TRAINING METHODOLOGY

## Course Materials

All participants receive comprehensive course materials, including detailed manuals, practical exercises, case studies, and reference guides to support learning and exam preparation.

## Hands-On Labs

Participants gain practical experience through hands-on labs, applying concepts in real-world scenarios to reinforce learning and build confidence.

## Assessments

Participants complete interactive assessments to test their understanding, reinforce key concepts, and ensure readiness for certification.

## Certification

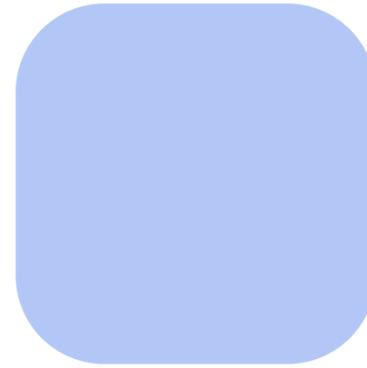

All participants receive an official Training Completion Certificate from Training Heights, validating their knowledge and skills gained during the course.

# TRAINING DELIVERY

Training Heights offers both Virtual (Online) and Physical (Classroom) training sessions, giving learners the flexibility to choose the learning format that best suits their schedule, location, and learning preference.
